EULARINET is a network

EULARINET is a networking project aimed at strengthening the dialogue on Science & Technology (S&T) between EU Member States, Associated States and Latin American Partner Countries (LA). EULARINET is aimed at stakeholders at policy and programme level as well as in research establishments and private companies.

EULARINET is an FP7 initiative

EULARINET is an INCO-NET funded by the European Commission through the Seventh Framework Programme for Research and Technological Development (FP7). INCO-NETs are an instrument to deepen the bi-regional dialogue on research policy between the EU and other regions.

EULARINET's goals are

- to jointly define S&T cooperation policies
- to identify mutual research priorities and implement them through specific activities in FP7
- to support and stimulate the participation of Latin American Partner Countries in FP7
- to improve the science-industry relationship between the EU and Latin America

EULARINET's strategic objectives are

- to facilitate scientific cooperation between the EU and Latin America – strengthening the EU-LA Knowledge Area
- to support the coordination of S&T policy with other EU policies towards Latin America, e.g. external or environmental policies
- to address the challenges associated with the globalization of research
- to contribute to reaching the global Millennium Development Goals

EULARINET is active in

- establishing a platform which brings together key EU and LA policy makers, programme managers, researchers as well as representatives of the private sector and civil society
- creating dialogue fora on S&T potential, policy goals, common interests and cooperation strategies
- providing a pool of knowledge for future cooperation based on strategic analysis, evaluation, impact assessment and scenario studies
- disseminating results to ensure wide diffusion of project findings

EULARINET is open to all

EULARINET covers all scientific and technological research areas of mutual interest to partners in the EU and in Latin America. To avoid redundancies, EULARINET also takes into account achievements of other cooperation programmes inside and outside FP7.
